Summary

Full Stack Software Engineer with experience building AI-first products and scalable web applications from scratch. Founding team member at an early-stage startup, owning end-to-end frontend architecture and AI-driven workflows. Strong expertise in React, TypeScript, Node.js, Python, and microservice-based systems, with hands-on experience in real-time streaming (SSE), RAG pipelines, and agentic systems. Passionate about building high-impact products in fast-paced environments.

Experience

Marxx AI

Sept 2025 – Present

Software Engineer

Gurugram, Haryana

- Founding team member responsible for building the core product platform from scratch, spanning ad research, ad creation, ideation testing, performance analytics, and AI-driven reporting workflows.
- Developed a cross-platform **Chrome extension** (Manifest V3) for ad library ingestion, with a pluggable adapter/scrapper architecture, Shadow DOM-isolated React UI, and dynamic ad detection via MutationObserver to support Meta, TikTok, Google, and LinkedIn ad surfaces.
- Architected an agentic AI assistant with *Just-In-Time context retrieval*, using RAG-style context injection and session state management to drive contextual actions across search, report generation, entity intelligence, and ad creation flows.
- Designed a hook-based action system with typed payload schemas and dynamic routing, allowing the AI agent to invoke platform workflows (search, analytics, report chat, test ad generation) via API endpoints and async job dispatching.
- Built semantic search over ad creatives using embedding-based retrieval and similarity scoring, supporting text and image queries with configurable filters and ranked result sets.
- Implemented streaming pipelines using Server-Sent Events (SSE) for token-level AI output delivery, with chunked processing and incremental response assembly for reports, chat, and ad analysis.
- Designed queue-based AI ad generation with job orchestration, progress tracking, and streaming status via background task pipelines for image, video, and script-to-video creative workflows.

Recur Club

June 2024 – September 2025

Software Engineer Intern

Gurugram, Haryana

- Architected and built **Ask AICA**, an end-to-end AI investment chatbot by laying the foundation of a new microservice, designing data models, configs, and tool-orchestrated RAG pipelines; also developed the complete frontend experience, improving time-to-answer by 65%.
- Developed a Deal Status Tracking System with an interactive UI, reducing TAT by 27% and boosting deal visibility and closure rate.
- Developed an AI-generated company overview module that consolidated financials, key metrics, and business insights, providing users with a 360° understanding and reducing research time by 72%.
- Designed and implemented a streamlined NACH cancellation flow across vendors, reducing user effort by 82% and significantly enhancing user control and transparency.
- Developed the frontend UI/UX for the AI-powered Magic Upload feature, enabling smart document tagging and boosting file retrieval speed by 79%.
- Refactored the client-facing frontend for company onboarding flow, using reusable components to enhance UX consistency and achieve a 40% increase in user engagement.
- Built intuitive UI system for repayment refund tracking, streamlining operations and reducing repayment refund-related queries by 64%.

Open Source Contributions

[freeCodeCamp](#) | *Curriculum · Merged Dec 2025*

PR #63789

- Fixed checkout lab tests to accept both implicit and explicit label associations, and clarified lab instructions to reflect that either method is valid — resolving a learner-reported issue affecting test correctness.

[freeCodeCamp](#) | *Curriculum · Merged 2025*

PR #63723

- Added practical code examples to the Semantic HTML review page for better clarity and learning experience for each semantic HTML element.

[matrix.org](#) | *Documentation · Merged Dec 2025*

PR #2981

- Merged the redundant *Cryptography* blog category into *Encryption* on the Matrix.org website, improving content discoverability and terminology consistency; contributed reasoned justification for the taxonomy decision during review.

Projects

Natak (Natak TV) | *Expo, React Native, react-native-webview, React Navigation, Google Sign-In, Expo Secure Store*

- Shipped the product as a mobile application using Expo: a native shell that hosts the existing web experience inside a WebView.
- Implemented native authentication (Google Sign-In) with secure token storage and bridged the session into the WebView by syncing tokens into web `localStorage`, plus bidirectional logout signaling via `postMessage` for a consistent app session.

Cha-ai | *Tech stack: Typescript, clsx, Vite, react-markdown, remark-gfm*

- Versatile, Easily Integrable Chatbot Package: A React-based chatbot with Context-Aware Assistance that can be embedded into any application, offering seamless integration and customizable UI to match the host platform.

Mudra | *React.js, Axios, dissu-talks, Vite, SCSS, Node.js, Typescript, Express.js, MongoDB, Redis*

- Mudra Guide provides comprehensive integration instructions for Mudra, a secure and scalable SSO microservice designed to generate and validate JWT tokens across your ecosystem.
- This guide helps developers seamlessly implement robust authentication using Mudra in distributed applications.

Guru Gang | *React, Vite, face-api.js, react-router-dom, axios, dissu-talks, Gemini API, Node.js, MongoDB, CSS*

- Guru Gang is an interactive learning platform offering courses, quizzes, assignments, and concept battles for students and teachers.
- It features progress tracking, a distraction-free focus room, and an AI-powered assistant to enhance the educational experience.

Skills

Languages and technologies JavaScript, TypeScript, JAVA, C++, C, Python, Node.js, Express.js, Spring Boot, React.js, MongoDB, Redis, MySQL

Developer Tools: Jira, gitHub, Jenkins, Slack, AWS, Postman, AWS (EC2, ECS, S3, Lambda, Step Functions, SQS), Docker

Education

SRM University

Sep. 2021 – May 2025

Bachelor of Technology CSE

CGPA - 8

Position Of Responsibilities / Achievements

- Vigyaan Hackathon 2nd Position
- STARTUP PITCH-IN 3rd Position
- Top 8 out of 1200 Teams in Vihaan a National Level Hackathon
